Reel-Power Battery Series
Instructions

Overview

The Reel-Power battery range is compatible with 24v Film Cameras and high powered 24v LED lighting when used in conjunction with a suitable Reel-Power fitting. The built in total battery protection system offers over discharge/voltage protection, short circuit and thermal protection.

General Use

Reel Power batteries have a nominal output voltage of 26v. When charged, Reel power batteries will exhibit around 29.4v, which for the majority of 24v equipment is well suited (like Arri Cameras and Kinoflo's Celeb). However other equipment may require regulation to a lower level to comply with the manufacturers voltage requirements. Your Lithium Reel Power battery is supplied charged to approximately 30% and can either be used on receipt or charged up to 100% before use.

Power Indicator

All Hawk-Woods Reel-Power batteries feature a Fuel-Gauge to monitor the voltage & current profile providing a visual guide to the state of charge.

Hawk-Woods Unique Reel-Power batteries are not compatible with any other V-mount systems due to the difference in mechanical design & voltage.

Charging

Reel-Power Batteries will require a Hawk-Woods Reel-Power 26v charger. These are available in Single, 2 & 4 channel simultaneous versions for fast charging. The Range can be recharged at any point without any negative effect on the batteries performance.
